Vol	untary Results Feedback Form						
>	I am an examiner in Workgroup: Example: 1610						
×	Relevant prior art found, search results used as follows:						
	☐ 102 rejection						
	☐ 103 rejection						
	☐ Cited as being of interest.						
	Helped examiner better understand the invention.						
	Helped examiner better understand the state of the art in their technology.						
•	Types of relevant prior art found:						
	☐ Foreign Patent(s)						
	<ul> <li>Non-Patent Literature         <ul> <li>(journal articles, conference proceedings, new product announcements etc.)</li> </ul> </li> </ul>						
>							
	Results verified the lack of relevant prior art (helped determine patentability).						
	Results were not useful in determining patentability or understanding the invention.						
Co	mments:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 termed as fucosyltransferase) proteins and nucleic acids from various strains of Helicobacter pylori. This enzyme catalyzes the transfer of a fucose residue from a donor substrate to an acceptor substrate. The fucosyltransferase polynucleotides and polypeptides are useful for the synthesis of oligosaccharides, glycoproteins and glycolipids. The present sequence is Helicobacter pylori fucosyltransferase protein.

                                                                                                                                                                                                                                   This is the amino acid sequence of the novel alpha-1,3-
fucosyltransferase of Helicobacter pylorin NCTC 1639, as deduced from the
newly isolated fucT gene (see AAV80321). The enzyme is characterised by 8
C-terminal heptad repeats and by the lack of a transmembrane domain. The
absence of a transmembrane domain allows the enzyme to be readily
released from recombinant host cells. The enzyme can be used in the
production of fucosylated oligosaccharides such as Lewis X, Lewis Y and
sialyl Lewis X, which are structurally similar to certain tumour
associated antigens found in mammals. These glycoconjugates also have
research and diagnosis utility in the development of assays to detect
mammalian tumours. The enzyme can also be used to raise specific
antibodies. Inhibition of abnormal fucT gene product activity can be used
for the treatment of intestinal mucosal disease. (Updated on 17-OCT-2003

                                                                                                                                                                                                                                                                                                                             The invention relates a purified transmembrane segment-free alpha 1,3-CC fucushry-K3-X4-Tyr, where X1, X2 and X4 is Asp or Asn; and X3 is CC lle, Val or Als. Also included are the nucleic acid encoding the protein CC acid, a host cell containing nucleic acid or vector, an antibody which CC selectively binds to the protein and a gene expression system for CC producing transmembrane segment-free alphal, 3- fucosyltransferase, CC comprising a host cell modified which encoding the protein for CC producing transmembrane segment-free alphal, 3- fucosyltransferase, CC comprising a host cell modified with a mucleic acid or its contacting the protein with a substrate such as Lex, Ley or slex, by CC contacting the protein with a substrate such as LacNac-R and GDP-fucose, CC and purifying the produced oligosaccharides, such as Lex, Ley or slex, by CC contacting the host cell with a substrate, to produce oligosaccharides are useful for produced oligosaccharides. The nucleic acid is useful cas a probe for detecting the nucleic acid, by contacting a sample with a nucleic acid probe that hybridises to alphal, 3-fucosyltransferase CC amplifying the nucleic acid using polymerase chain reaction (PCR). The host cell is useful for producing a transmembrane segment-free alphal, 3-fucosyltransferase-fusion protein, by growing the host cell containing a created protein and isolating the fusion protein. Browing the host cell containing a cc vector operably linked to a polynucleotide encoding a desired polypeptide or peptide under conditions which allow expression and secretion of the fusion protein in the sample with a substrate protein in the sample is indicative of infection by Helicobacter pylori or the presence of malignant cells. The antibody is also useful for diagnosing disorders and monitoring disease, and for inhibiting abnormal alphal, 3- and contained the produced acid is useful as gart of ribozyme and/or triple helix sequences and for alphal, 3- and contained the produced acid is useful as a protein and contained acid is u
                                                             fucosyltransferase gene regulation. Oligosaccharides synthesised using the protein or cell are useful in the development of assays to detect mammalian tumours. The present sequence represents an H. pylori alphal, 3 fucosyltransferase encdoed by the fucT gene. (Updated on 29-AUG-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Purified transmembrane segment-free alpha1,3-fucosyltransferase polypeptide useful for producing fucosylated oligosaccharides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Enzyme; fucT; alpha1,3 fucosyltransferase; oligosaccharide; Lex; Ley; sLex; Helicobacter pylori infection; malignant cell; mammalian tumour.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 240
```

(including the complement or fragment), a vector containing the nucleic caid, a host cell containing nucleic acid or vector, an antibody which comparising thanks to the protein and a gene expression system for comprising thanks to the protein and a gene expression system for comprising a host cell modified with the nucleic acid or its enzymatically active portion. The protein and cells are useful for producing fucosylated oligosaccharides, such as Lex, Ley or sLex, by contacting the protein with a substrate such as LackNac-R and GDP-fucose, and purifying the produced oligosaccharides, or by culturing the cell with a substrate, to produce oligosaccharides and purifying the obtained oligosaccharides. The nucleic acid is useful as a probe for detecting the nucleic acid, by contacting a sample with a nucleic acid probe that hybridises to alphal, 3-fucosyltransferase complifying the nucleic acid with a substrate segment-free alphal, 3-fucosyltransferase complifying the nucleic acid using polymerase chain reaction (PCR). The host cell is useful for producing a transmembrane segment-free alphal, 3-fucosyltransferase fusion protein, by growing the host cell containing a vector operably linked to a polymucleotide encoding a desired polypeptide or peptide under conditions which allow expression and secretion of the fusion protein and isolative of infection by Helicobacter pylori or the prosence of malignant cells. The antibody is also useful for diagnosing disorders and monitoring disease, and for inhibiting abnormal alphal, 3-fucosyltransferase gene product activity. The nucleic acid is useful as part of ribozyme and/or triple helix sequences and for alphal, 3-gart of ribozyme and/or triple helix sequences and for alphal, 3-gart of ribozyme and/or triple helix sequences and for alphal, 3-gart of ribozyme and/or triple helix sequences and for alphal, 3-gart of ribozyme and/or triple helix sequences and for alphal, 3-gart of call as each and for alphal, 3-gart of call as a sequence and call as useful contained as a sequen The invention relates a purified transmembrane segment-free alpha 1,3-fucosyltransferase polypeptide, having a repeat of the sequence: X\_1-X\_2-fucu-Arg-X\_3-X\_4-Tyr, where X\_1, X\_2 and X\_4 is Asp or Asn; and X\_3 is Leu-Arg-X\_3-X\_4-Tyr, where X\_1, X\_2 and X\_4 is Asp or Asn; and X\_3 is Ile, Val or Ala. Also included are the nucleic acid encoding the protein

ID ABG308 CC fucosyltransferase polypeptide, having a repeat of the sequenc: X 1-X 2 (C ILE, Val or Ala. Also included are the mucleic acid encoding the protein CC (including its complement or fragment), a vector containing the protein CC (acid, a host cell containing nucleic acid or vector, an antibody which CC selectively binds to the protein and a gene expression system for CC comprising a host cell modified with the nucleic acid or its complement or fragment), a vector containing the mucleic comprising a host cell modified with the nucleic acid or its comprising a host cell modified with the nucleic acid or its comprising a host cell modified with the nucleic acid or its contacting the protein with a substrate such as Lex, Ley or sLex, by CC contacting the protein with a substrate such as Lex, Ley or slex, by CC contacting the bobtained oligosaccharides, or by culturing the cell, contacting the obtained oligosaccharides, or by culturing the cell, contacting the nucleic acid with a substrate, to produce oligosaccharides contacting a sample with a probe for detecting the nucleic acid, by contacting a sample with a contact cell is useful for producing a transmembrane segment-free alphal, 3-fucosyltransferase fusion protein and isolating bybridisation of the probe; or by amplifying the nucleic acid using polymerase chain reaction (PCR). The consyltransferase fusion protein, by growing the host cell containing a corporately linked to a polymucleotide encoding a desired polypeptide corporately linked to a polymucleotide encoding a desired polypeptide corporately linked to a polymucleotide encoding a desired polypeptide corporately linked to a polymucleotide encoding a desired polypeptide corporate and isolating the fusion protein. The antibody is useful as useful as useful as useful as useful as the protein and isolating the fusion protein and secretion of the protein in the complement of sassays to detect communalian tumours. The present sequence and for alphal, 3-fucosyltransferase gene regulation. Oligosaccharides synth The invention relates a purified transmembrane segment-free alpha 1,3-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention relates to novel isolated polynucleotides and the encoded polypeptides thereof, which are related to the fucosyltransferase enzymes (FutA and FutB) of Helicobacter pylori (H. pylori). Specifically, it refers to alpha 1-3/4 fucosyltransferase enzymes that can be used to chemically synthesise glycopyroteins and glycolipids with the desired oligosaccharide moieties (i.e. by transfer of a fucose residue to N-acetylglucosamine), such that they are useful in the preparation of glycoconjugates. The present invention describes how bacterial fucosyltransferase is unaffected by the sialyation status of the acceptor sugar, as opposed to the mammalian homologue, and furthermore, bacterially expressed enzymes offer a large cost saving relative to mammalian expression systems. This polypeptide sequence is an H. pylori strain 1218 FutB protein sequence of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches 385;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This sequence represents an alpha-1,3/4-fucosyltransferase protein which was used in the method of the invention for producing a fucosylated glycoprotein. The method involves contacting a recombinant fucosyltransferase protein with a mixture comprising a donor substrate which comprises a fucosyl residue, and an acceptor substrate on a glycoprotein, under conditions such that the fucosyltransferase protein catalyzes the transfer of the fucose residue from a donor substrate to the acceptor substrate on the glycoprotein. The method is useful for the fucose fucosity fucosity substrate to the fucose fucose fucose fucos substrate to the fucose fucose fucos substrate to the fucose fucose fucose fucos substrate to the fucose fucose fucose fucose fucose fucose fucos fucose fuco
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Producing fucosylated glycoprotein, by contacting recombinant fucosyltransferase protein with mixture comprising donor substrate acceptor substrate on glycoprotein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       23-JUL-2002; 2002US-0398156P.

This enzyme catalyzes the transfer of a fucose residue from a donor substrate to an acceptor substrate. The fucosyltransferase polymucleotides and polypeptides are useful for the synthesis of oligosaccharides, glycoproteins and glycolipids. The prese sequence is Helicobacter pylori fucosyltransferase protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Example 1; SEQ ID NO 6; 97pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   polypeptides thereof, which are related to the fucosyltransferase enzymes (FutA and FutB) of Helicobacter pylori (H. pylori). Specifically, it refers to alpha 1-3/4 fucosyltransferase enzymes that can be used to chemically synthesise glycopyroteins and glycolipids with the desired oligosaccharide moieties (i.e. by transfer of a fucose residue to N-acetylglucosamine), such that they are useful in the preparation of glycoconjugates. The present invention describes how bacterial fucosyltransferase is unaffected by the sialyation status of the acceptor sugar, as opposed to the mammalian homologue, and furthermore, bacterially expressed enzymes offer a large cost saving relative to mammalian expression systems. This polypeptide sequence is an H. pylori strain 1182 FutB protein sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New isolated polynucleotide encoding fucosyltransferase protein, useful for synthesizing oligosaccharide moiety on a protein or lipid that is unglycosylated in its native form or for synthesizing glycolipids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Helicobacter pylori.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Helicobacter pylori strain 1182 FutB protein SeqID
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ADJ77810;

                        This sequence represents an alpha-1,3/4-fucosyltransferase protein which was used in the method of the invention for producing a fucosylated glycoprotein. The method involves contacting a recombinant fucosyltransferase protein with a mixture comprising a donor substrate which comprises a fucosyl residue, and an acceptor substrate on a glycoprotein, under conditions such that the fucosyltransferase protein catalyzes the transfer of the fucose residue from a donor substrate to the acceptor substrate on the glycoprotein. The method is useful for producing fucosylated glycoprotein.
                                                                                                                                                                                                                                                                             WPI;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      strains of Helicobacter pylori. This enzyme catalyzes the transfer of a fucose residue from a donor substrate to an acceptor substrate. The fucosyltransferase polymucleotides and polypeptides are useful for the synthesis of oligosaccharides, glycoproteins and glycolipids. The present sequence is Helicobacter pylori fucosyltransferase protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 486 AA;

H. pylori alpha1,3 fucosyltransferase 29-AUG-2003 21-OCT-2002 (revised) (first entry)

Helicobacter pylori infection; fucT; alphal,3 fucosyltransferase; oligosaccharide; Lex; Ley; elicobacter pylori infection; malignant cell; mammalian tumour.

#2.

Helicobacter pylori; strain

US2002068347-A1

06-JUN-2002

```
Ce enzymatically active portion. The protein and cells are useful for contacting fucosylated oligosaccharides, such as Lex, Ley or slex, by cell contacting the protein with a substrate such as LacNAc-R and GDP-fucose, cell and purifying the produced oligosaccharides, or by culturing the cell, contacting the host cell with a substrate, to produce oligosaccharides and purifying the produced oligosaccharides. The nucleic acid is useful cell, as a probe for detecting the nucleic acid, by contacting a sample with a nucleic acid probe that hybridises to alphal,3-fucosyltransferase constructing a sample with a cell is useful for producing a transmembrane segment-free alphal,3-fucosyltransferase-fusion protein, by growing the host cell containing a vector operably linked to a polynucleotide encoding a desired polypeptide or peptide under conditions which allow expression and secretion of the fusion protein and isolating the fusion protein. The antibody is useful for danguosing disorders and monitoring disease, and for inhibiting abnormal alphal,3-cells in the protein or cells. The antibody is also useful for diagnosing disorders fucosyltransferase gene product activity. The nucleic acid is useful as part of ribozyme and/or triple halix sequences and for alphal,3-cells fucosyltransferase gene regulation. Oligosaccharides synthesised using the protein or cell are useful in the development of assays to detect mammalian tumours. The presents encoded by the fucT gene. (Updated on 29-AUG-2003 to standardise of field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

Val or Ala. Also included are the nucleic acid encoding the protein (including its complement or fragment), a vector containing the nucleic acid, a host cell containing nucleic acid or vector, an antibody which selectively binds to the protein and a gene expression system for producing transmembrane segment-free alpha1, 3-fucosyltransferase, comprising a host cell modified with the nucleic acid or its
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Purified transmembrane segment-free alphal,3-fucosyltransferase polypeptide useful for producing fucosylated oligosaccharides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 485
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Local Similarity

                                                                                                                                                                                                                                                                                                                                                                                                   This invention relates to novel isolated polynucleotides and the encoded polypeptides thereof, which are related to the fucosyltransferase enzymes (PutA and PutB) of Helicobacter pylori (H. pylori). Specifically, it refers to alpha 1-3/4 fucosyltransferase enzymes that can be used to chemically synthesise glycoproteins and glycolipids with the desired oligosaccharide moieties (i.e. by transfer of a fucose residue to N-acetylglucosamine), such that they are useful in the preparation of glycoconjugates. The present invention describes how bacterial fucosyltransferase is unaffected by the sialyation status of the acceptor sugar, as opposed to the mammalian homologue, and furthermore, bacterially expressed enzymes offer a large cost saving relative to mammalian expression systems. This polypeptide sequence is an H. pylori strain 26695 FutA protein sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated polymucleotide encoding fucosyltransferase protein, us for synthesizing oligosaccharide moiety on a protein or lipid that unglycosylated in its native form or for synthesizing glycolipids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Helicobacter pylori strain 26695 FutA protein SeqID

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                   This sequence represents an alpha-1,3/4-fucosyltransferase protein whicl was used in the method of the invention for producing a fucosylated glycoprotein. The method involves contacting a recombinant fucosyltransferase protein with a mixture comprising a donor substrate which comprises a fucosyl residue, and an acceptor substrate on a glycoprotein, under conditions such that the fucosyltransferase protein catalyzes the transfer of the fucose residue from a donor substrate to the acceptor substrate on the glycoprotein. The method is useful for producing fucosylated glycoprotein.
                                                                                                                                                                                                                                                                                                                                                   Producing fucosylated glycoprotein, by contacting recombinant fucosyltransferase protein with mixture comprising donor substrate acceptor substrate on glycoprotein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         alpha-1; 3/4-fucosyltransferase; glycoprotein; fucosyltransferase;

### **Protein Sequence Searches - February 2005**

All of the sequence databases on ABSS have recently been updated.

- Please note that the curators of the UniProt database have purged some temporary accession numbers from the most recent version of UniProt. These sequences have been assigned new permanent accession numbers. The new UniProt record may not contain the previous temporary accession number.
- If you encounter an accession number from an older search run against UniProt (results file extension .rup) that can no longer be found in the database, the permanent record with the new accession number can be found by searching the old accession number in the UniProt Protein Archive database (UniPARC) at:

http://www.pir.uniprot.org/database/archive.shtml

If you have any questions regarding this information or your results, please contact any STIC searcher.

When submitting sequence search results for scanning into IFW, please include a copy of this attachment to assist any future Examiners or members of the public who may encounter UniProt temporary accession numbers.
